Week 2: Technical Posters

Session aims

- **Review** the requirements of a technical poster
- **Identify** key information to include and collect
- **Plan** a development journal for your specialist artefact

Discussion: Why a poster?

Poster requirements

- **Describe** your artefact
- **Illustrate** the **architecture** of your artefact
- **Justify** key **development choices** and **design decisions**
- Don't forget your **name** and **project title**!
- Format: **Portrait A3 PDF** document

- System components, patterns, data structures...
- At least one **UML diagram** (COMP2x0)

Analyse merits
and flaws

Poster marks allocation

COMP2x0

- Threshold: 30%
- Description of architecture: 10%
- UML diagram: 10%
- Appropriateness of artefact design: 15%
- Context for practice-based research: 10%
- Defence of argument: 10%
- Appropriateness of practice-based research methods: 10%
- Academic conventions: 5%

VR220

- Threshold: 15%
- Explanations and discussions of technical elements of the project: 10%
- Description of project objectives and their justification: 10%
- Reflection on the artefact: 15%

Technical posters: structure

Tell a **story**!

- The **problem** that needed to be addressed, and **why**
- A **solution** that worked (and any that didn't: practice-based research...)
- The **outcome** and its impact – does it:
 - Meet the **goals**?
 - Add **value**?
 - Open up **new areas** of interest or approaches?
 - Have a **positive impact** for players/users/developers/coworkers etc.?

Motivation for
journey

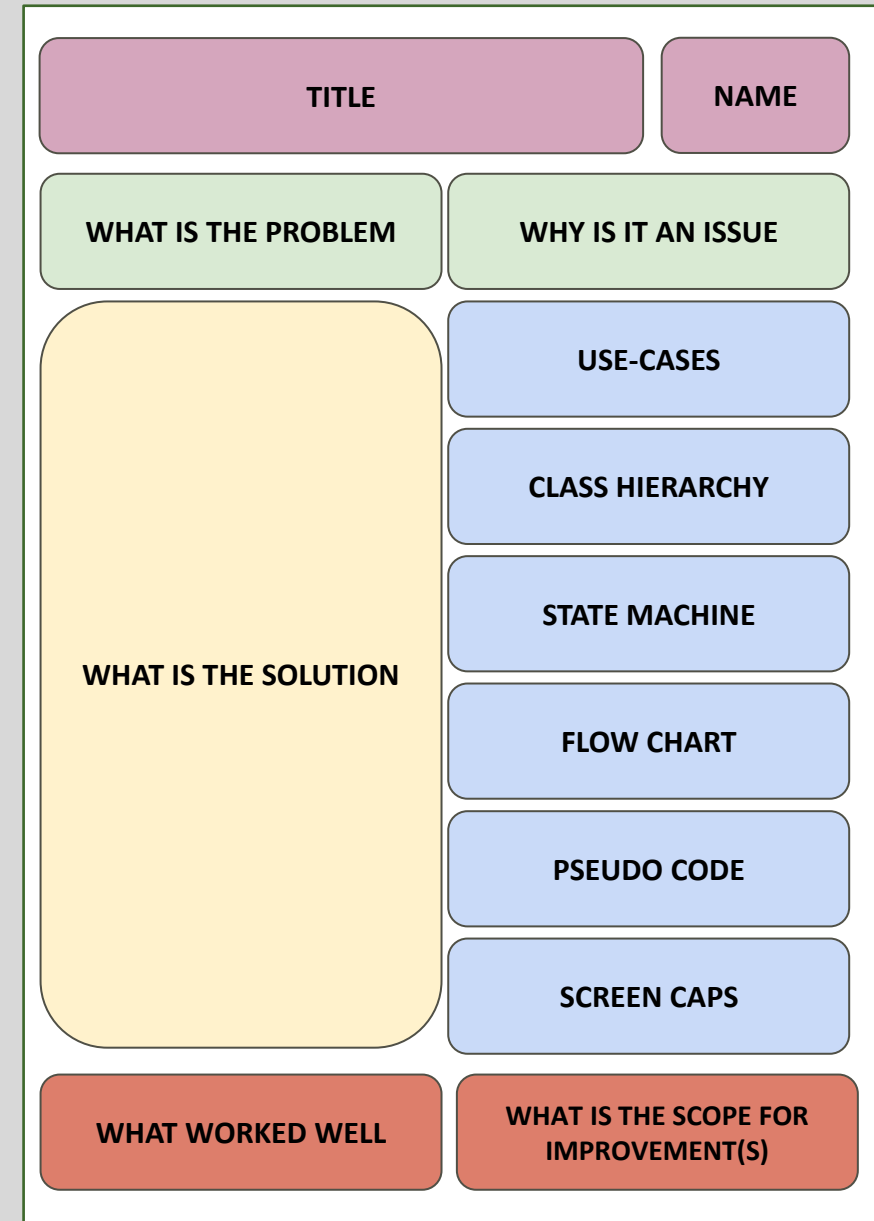

Journey
progress

Where you arrived
and what you
discovered on the
way

Poster layout

Style/layout: simple, clear, readable – concentrate on **key details** and favour **images** over text.

- More info/guidelines:
<https://www.makesigns.com/tutorials>

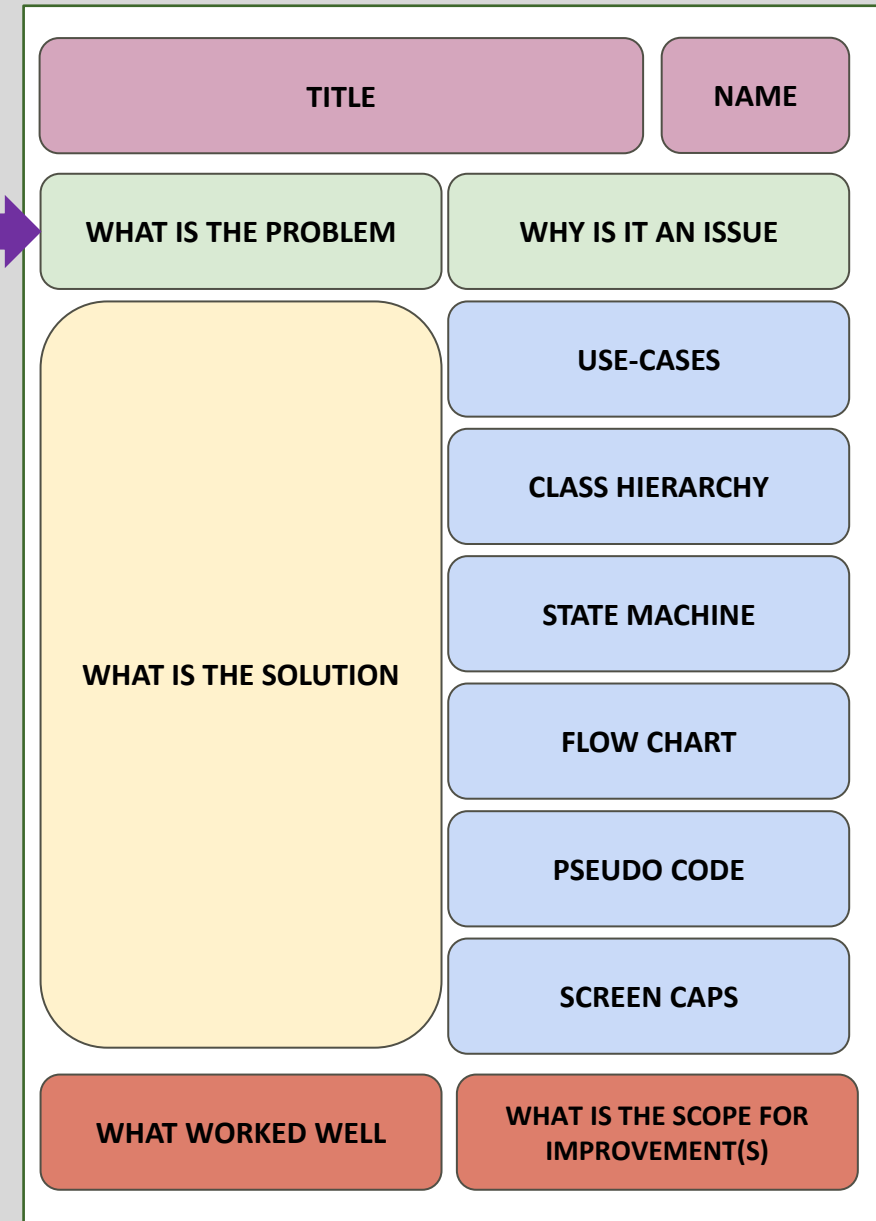

Poster intro

Problem definition: **what** it is and **why** it needs solving.

Possibly include:

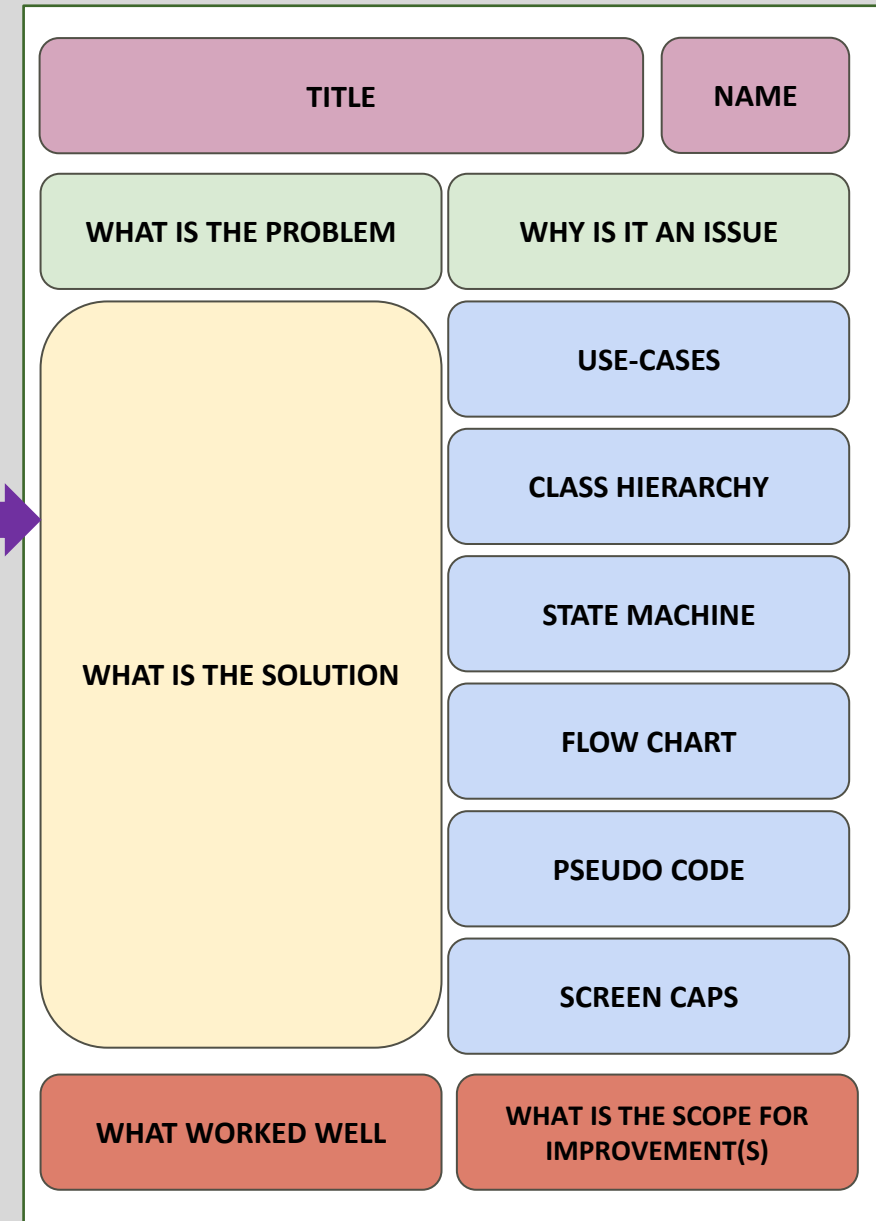

- A **screenshot**
- A **use case**
- Some other **illustration** of the current state of things...

Poster text

Solution description: details of **what** the **solution** is, and **how** it is implemented

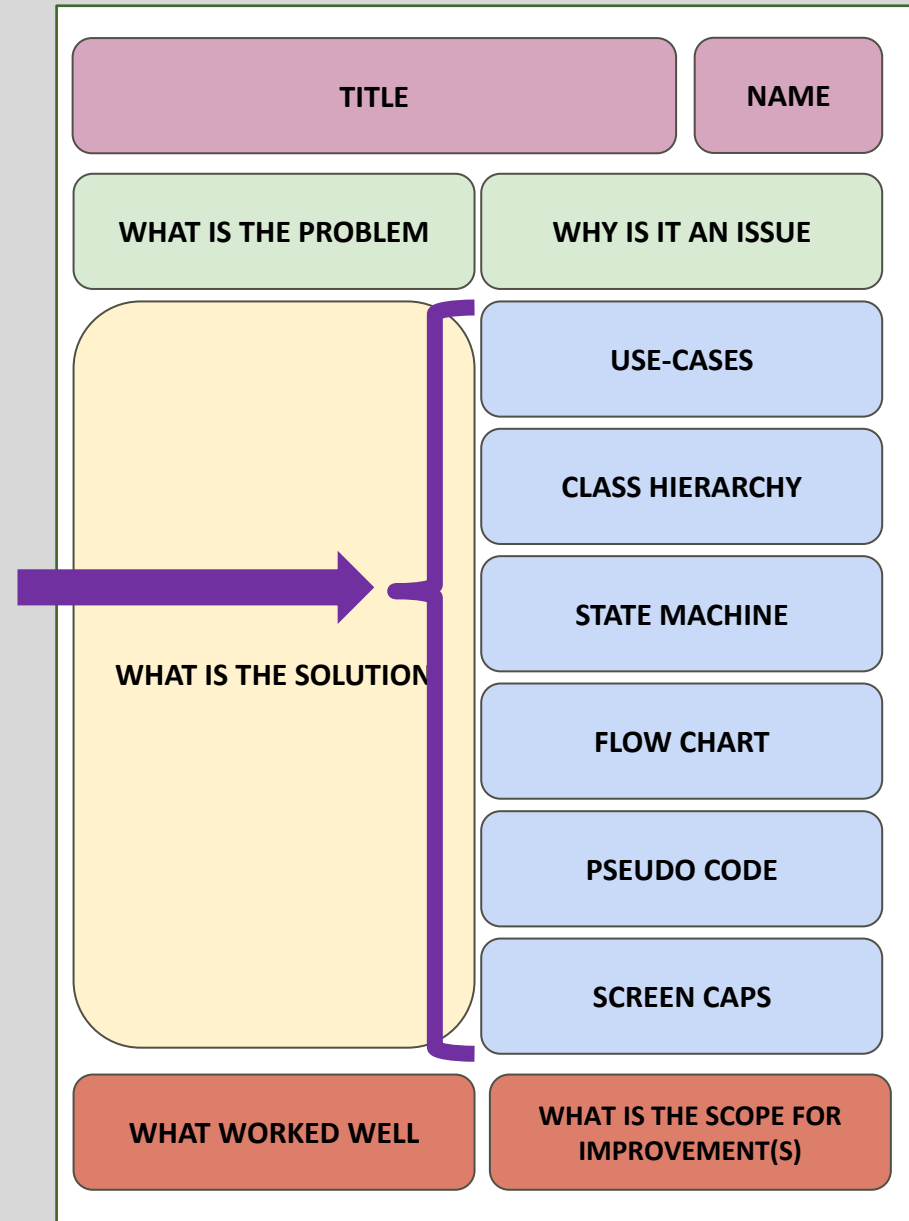

- Should contain **some text** – but not too much!
- Use references to modelling tools, and **images** if appropriate...

Poster diagrams

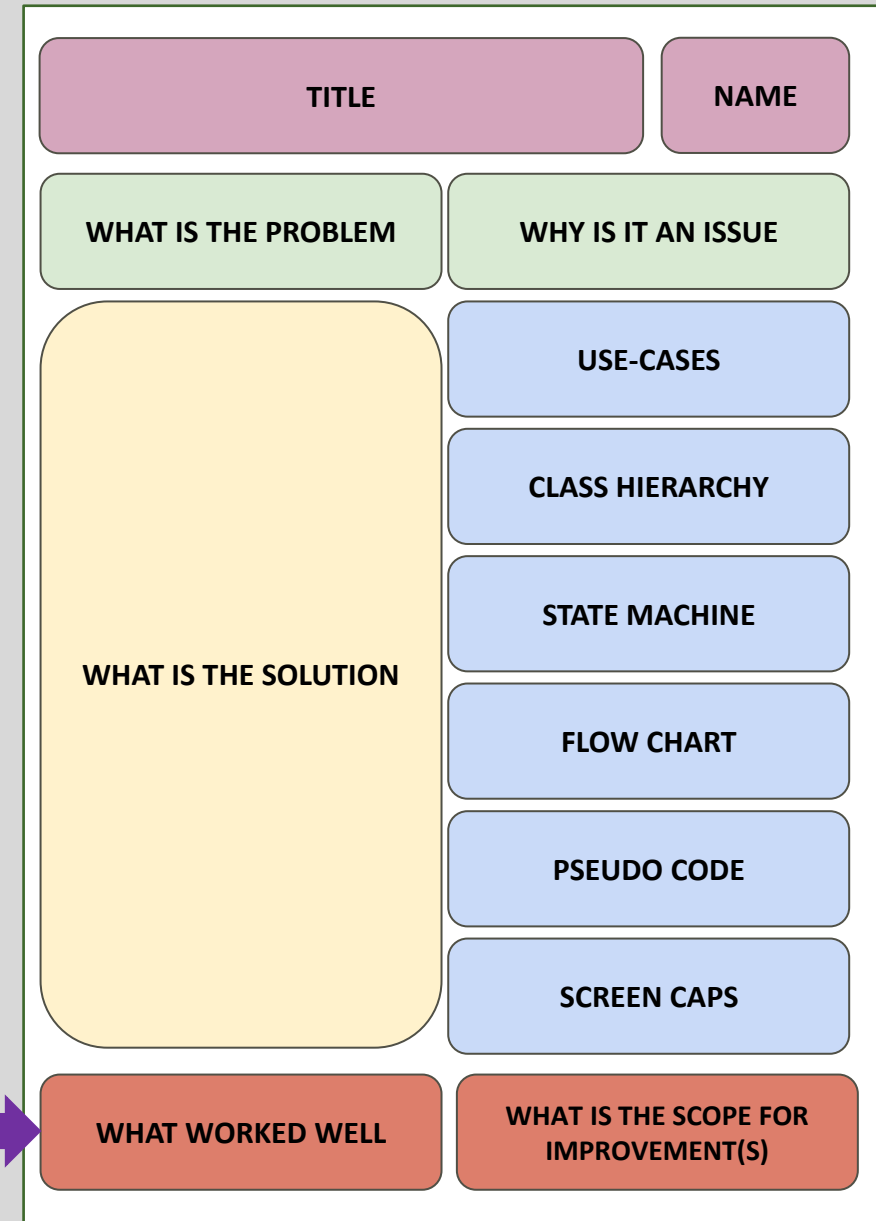

Modelling tools: a selection of **visual tools** for articulating your solution

- Don't use all of them, just the **most appropriate** ones for your problem!
- Don't need to include all the details; an **overview** may be clearer
- No Blueprints screenshots!

Poster conclusion

Outcome and impact: opportunity for reflection and constructive criticism

Activity: poster review

This week's Padlet has some example posters on it; choose 2-3 that catch your eye and **review** them!

Add comments (or connect boxes) to state:

- How **effectively** does it convey **information**?
- Has it covered the **key points** from the requirements?
- What **details** about the project does it include?

Discussion: key information

Asynchronous task: journal setup

- Read the advice on keeping a development journal here:
<https://spin.atomicobject.com/2014/10/13/keeping-development-journal/>
- Considering the poster [examples](#) and [requirements](#),
 - [Decide](#) what information about your project it would be useful to record (e.g. references, similar work/examples, progress, design decisions...).
 - Create a [template journal entry](#) page in your [notebook](#) on the Teams site (in the “[Class Notebook](#)” tab of the [General](#) channel).
 - This can just be some [titles/headings to copy](#), or you can adapt an existing template – instructions available [here](#) for the app.
- Use your template to [create an entry](#) for anything you’ve done so far on your assignment (e.g. deciding on an artefact/writing the proposal).
